Dt. 21.12..2012.

To
All Regional Managers
APSRTC.

Sub:- DCP-VEMAS: (TYRES) - Generation of exception reports showing wrong tyre maintenance practices at Depots - Implmentation of modified software - Reg.

000

A new program has been developed in "VEMAS" module to generate a report which shows the vehicles numbers with the following defective tyre maintenance practices:

- i. Vehicle fitted with RC2 and above condition tyres in front position.
- ii. Vehicle fitted with Repair tyres in RNSO/RNSI postions.
- iii. Vehicles having both Radial / Nylon tyres combination.

The programs named "tycensusdat.cob" and "vmen9999.isf" are to be down loaded from the "RTCWAN" /tptobj/vemas directory to depot /tptobj/vemas directory and also to copy the "vmen9999.isf" file to data directory. This program can be run through System Supervisor menu under 01/11 option TYRES VEHICLE WISE STATUS STMT/ TYRES MIS MATCH.

This program will generate a report named "depotcodetyrestatus.rpt" in reports directory and a "dat" file named "depotcodeYMMDDtyrestatus.dat" will be generated in the med directory. This "dat" file is to be uploaded to "RTCWAN" /ho-data directory every month.

The above reports will be generated along with the daily preventive Maintenance statement. These reports can be generated as and when required. Mechanical Incharges are advised to verify this statement regularly to increase the tyre mileages, duly rectifying the above defects.

Hence all the Regional Managers are requested to give necessary instruction to the Depot Managers to implement the program and to submit the "dat" files every month to /ho-data.
