Circular No.06/2006-MED dated 31.1.2006

**Sub: FOOTWEAR - Usage of exclusive Footwear by the workmen working
F.I.E calibration room in Workshops - Instructions issued - Reg.**

VC & MD during his visit of Zonal Workshop, Vijayawada on 30 1 2006 has observed that the employees working in Fuel Injection Equipment Calibration Room working with the same foot wear that they were wearing while coming to duty Workmen wearing same foot wear inside and outside the Fuel Injection Calibration Room, is undesirable since they carry dust & foreign material into the restricted area of Fuel Injection Pump Section.

The fuel efficiency predominantly depends on the quality of the overhauled Fuel Injection Pump at the Workshops. The very "purpose of providing airtight and Air conditioned room is to create dust free atmosphere. The particulate matters and fine dust if enters into the mating parts of highly precision components give a way for early wear or cause wall scoring.

All the WMs/AWMs and In-charges of the FIP Section shall ensure usage of exclusive footwear by the employees working in the FIE Room Separate shoe rack may be provided for this workmen to leave the foot wear outside the F.I.E. room
